METAL-BITE®

Universal precision registration material

www.r-dental.com
Early in 2000 the classical dark grey METAL-BITE® was introduced as the first universal fast setting automixing vinyl polysiloxane for universal precision registrations.

Over time the conventional indications have been extended: As a result of innovative applications METAL-BITE® is not only used for static but also for dynamic registrations and because of its radiopacity METAL-BITE® is used additionally for manufacturing surgical guides for implantology and for bite plates of face bow registrations.

In addition METAL-BITE® is used for fixing the para-occlusal impression tray for theachsioigraphic and for CMD applications. METAL-BITE® may be used for conventional intraoral registrations (static occlusion registrate in hicp) and optionally for chairside and labside powderfree scanning with universal CAD/CAM systems. The registrations are rigid and easy to trim.

The indications of METAL-BITE® are as follows:

- universal registrations and static hicp-registrations
- classical face-bow registrations according to Prof. (HR) Dr. A. Gutowski, Germany
- for CMD applications according to Dr. C. Köneke, Germany
- for fixing para-occlusal impression trays for theachsioigraphic according to to PD Dr. M. O. Ahlers, Germany
- antagonist registrations and powderfree scanning with universal CAD/CAM systems
- for manufacturing surgical guides for implantology

METAL-BITE® surpasses the requirements of the standard DIN 13903 (Dentistry - Jaw relation recording material). The performance parameters are shown as follows:

**Benefits at a glance:**

METAL-BITE® offers you

- a universal and scannable precision registration material for chairside and labside indications
- a comfortable working time for a stress free registration
- an excellent thixotropic behaviour (excellent standing and flowable character)
- an excellent snap-set (this is a temporally steep, sigmoidal (S-form) phase history during the polymerisation phase)
- a precise detail reproduction
- a high Shore-D hardness to prevent deformation
- an excellent cutting, contouring, easy trimming and easy withdrawal from the mouth.

The METAL-BITE®-cartridge should be stored below 25 °C (78 °F) and horizontally.

**Order information:**
